

Amendment to the Claims:

This listing of claims replaces all prior versions, and listings, of claims in the application:

1. (Original) A method for generating a facsimile of an image comprising the steps of:

generating signals representative of a particular shape;  
arranging said signals into a field matrix of a plurality of pixel signals representative of location of at least some points of the image field;

providing an array of electro-optical devices each transformable between a first condition and a different second condition in response to electromagnetic stimulation; and

using said pixel signals to stimulate the devices in said array to generate at said array a facsimile of said selected image.

2-56. (Cancelled)

57. (New) A method for generating a facsimile of an image comprising:

generating at least one electrical signal representative of a particular shape; and

arranging said at least one signal into at least one pixel signals representative of location of at least some points of the image field;

providing an array of electro-optical devices, each transformable between a first condition and a different second condition in response to electromagnetic stimulation; and

using said pixel signals to stimulate the devices in said array to generate at said array a facsimile of said particular shape.
